

## **Fentanyl in heroin? Check it here!**

For free // without giving heroin // result immediately

**Fentanyl is up to 100 times more potent than heroin.** In many countries, the synthetic opioid can now be found as an additive in heroin. The result: 10000 deaths!

**Fentanyl could also be in heroin in Germany.** Consumption can suddenly become life-threatening for you, even though your substance looks the same as always. Even a tiny amount, like a few grains of salt, can cause a fatal overdose. It doesn't matter whether you inject or smoke.

**Here in the drug consumption room you can have your heroin checked.** You don't have to give away any of the heroin. The test works with leftovers in the spoon or on the packaging. You will get the test result in a few minutes. If the test shows fentanyl, we can advise you on what to do.

**Together we can avoid emergencies!**
